EASE is a program developed and presented for persons with Alzheimer’s disease and their families.

During 8 weeks of two-hour-a-week sessions, persons with Alzheimer's disease and family members (or friends) participate in information and support sessions with skilled facilitators and expert presenters.

Persons with Alzheimer's disease and their families become more hopeful and more confident as they face the future. They also develop a network of people with the same concerns.

Next Program starts May 2007
